

WALK-BEHIND SPREADERS

Whether you're drop-spreading along narrow walkways, or broadcast-spreading across wider areas, WESTERN® Professional Walk-Behind Spreaders will assure that your ice-control material is applied accurately and evenly. Constructed of sturdy corrosion-free polyethylene, both models feature a clear hopper cover to keep your de-icing material dry and flowing freely while providing a clear view inside so you know when it's time to reload. With pneumatic tires and a powder-coated steel frame, these spreaders are designed to provide trouble-free performance.

MODEL WB-100B BROADCAST SPREADER

- 100 lb. capacity
- Corrosion-free polyethylene hopper
- Single-slot port design
- Clear polyethylene hopper cover
- Top screen
